

TAILORING THAT DOESN'T COST THE EARTH

Environmental Impact

WE ARE CARBON NEUTRAL

**WE CREATE CORPORATE
CLOTHING THAT DOESN'T
COST THE EARTH**

Over the last two years, our tailoring supplier, Clubclass have taken important steps to reduce their carbon emissions.

In the UK, businesses account for over 85% of total emissions - making corporate action the number 1 priority in helping stop climate change. We are proud to announce that we have partnered with Carbon Neutral Scheme to measure and offset our carbon footprint, to become Certified as a Carbon Neutral Business.”

CC CLUBCLASS

THE POWER OF A GOOD SUIT

Hydroelectric project in Chile.

Burgos Wind Project in the Philippines

We work with projects not just on emissions, but also their wider impact – providing secondary benefits via education, employment, clean water, and a positive impact on the local wildlife and ecology.

We support projects such as the Hydroelectric project in Chile. Located in the Tinguiririca River upper valley, this Hydroelectric project is around 120km south of Santiago.

The power plant generates certified emission reductions (CERs) by displacing electricity generation from grid connected fossil fuel-fired power plants that would otherwise be generating electricity.

We also support projects such as the The Burgos Wind Project in the Philippines. At the time it was built, it was also considered to be one of the largest wind farms in South East Asia. It is located in one of the best areas in the country to generate clean energy from wind.

The 150-MW facility has fifty (50) Vestas V90 wind turbines, each with a rated capacity of 3 MWs. The wind farm has a substation which is connected to a 43 KM 115 kV Transmission Line to the Laoag substation of the grid operator, the NGCP (National Grid Corporation of the Philippines).

Our supply chain is industry leading in terms of compliance, sustainability and welfare so you can feel assured that, at Clubclass, we employ only the highest practices.

As a company we adhere to several internationally recognised industry standards.

TAILORING BUILT TO LAST

Decades of experience and craftsmanship, combined with a world class supply chain team, allows us to create beautifully engineered tailored clothing that is built to last.

EVERY SUIT CONTAINS 45 RECYCLED PLASTIC BOTTLES

The polyester used in our collections is made from recycled plastic bottles. That means by wearing Clubclass Corporate Clothing you are preventing plastic bottles reaching our oceans and landfill.

Yet we don't want to stop there. We have a world class supply chain team and we're constantly looking at fabric innovation to improve the sustainability of our garments.

WE'RE CONSTANTLY REVIEWING OUR PACKAGING

In 2021 we stopped using hangers for waistcoats, skirts and trousers. They are now carefully folded and packaged in recycled plastic that can be recycled again and again.

PACKING YOUR ORDER

All of the board used in the production of Clubclass cartons is made from at least 90% recycled fibres and 100% of the carton can be recycled again – they're also fully biodegradable. Any new material used comes from managed softwood forests that are certified as sustainable.

When we pack your order we select the most appropriate carton. We then pack efficiently, and partner with a leading parcel carrier who commit that every parcel they deliver is carbon neutral.

OUR OFFICE

The Lights

Our lights are on motion sensors to preserve energy. Clubclass HQ is fuelled by the solar panels on the roof.

Planting Trees

We have planted trees around the office and warehouse to encourage wildlife and to lock up more carbon.

Clubclass Cars

A number of company cars have been updated to be low emission hybrids or electric vehicles.

Our Building

Our building is built to the highest EU environmental standards.
